Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 2615

4. Claims 2, 6, 16, 17, 27, 28, 38 & 39 are rejected under 35 U.S.C. 102(b) as being anticipated by Takahashi et al (US 5,831,676).

Regarding claim 2, Takahashi discloses an apparatus (Fig. 3; col. 4, lines 34-45) for controlling an aperture of a camera, comprising:

a first determining device (25, 19, 20; Fig. 3) that determines an aperture range (F 1.6 to greater than F 1.4) for a normal shooting (area A) which secures predetermined optical capability (see Fig. 9; col. 6, lines 18-47; col. 9, lines 30-42);

a second determining device (25, 19, 20) that determines an aperture range (les than F 2 for areas B & C) including an aperture (F 1.4) out of the aperture range for the normal shooting (see Fig. 9; col. 9, lines 43-53 and col. 11, lines 52-65, wherein an important note is taken for the limit area B1 at an intersection between areas A and B at which the aperture set for the end of area A is greater than F 1.4 while the aperture set for areas B and C is substantially at F 1.4); and

a controlling device (25) that controls a diaphragm mechanism (2, 13, 14) to set an aperture (F 1.4, so called Opening Value) within the aperture range determined by said second determining device for automatic exposure, and controls the diaphragm mechanism (14) to set an aperture within the aperture range determined by said first determining device for recording of an image (see Figs. 3 & 9).

Regarding claim 6, see the analysis of claim 2. Furthermore, Takahashi also discloses a taking lens (1) and diaphragm mechanism (2, 13, 14) that adjusts an amount of light which enters the camera through the taking lens (see Fig. 3; col. 5, lines 4-16).

Art Unit: 2615

Regarding claims 16 & 17, see the analysis of claim 2. Takahashi further discloses that the aperture is set to largest value which is opening value for selected portrait mode (see Fig. 21 and col. 21, lines 3-7, 36-46).

Regarding claims 27 & 28, see the analyses of claims 2, 16 & 17.

Regarding claims 38 & 39, see the analyses of claims 6, 16 & 17, wherein the second determining device sets the aperture to the largest value (F 1.4 or so called opening value) for selected portrait mode to provide smallest depth of focus.
